Forward-Looking Statements

During the course of this presentation, we may make forward-looking statements regarding future events or the expected performance of the company. We caution you that such statements reflect our current expectations and estimates based on factors currently known to us and that actual events or results could differ materially. For important factors that may cause actual results to differ from those contained in our forward-looking statements, please review our filings with the SEC.

The forward-looking statements made in this presentation are being made as of the time and date of its live presentation. If reviewed after its live presentation, this presentation may not contain current or accurate information. We do not assume any obligation to update any forward looking statements we may make. In addition, any information about our roadmap outlines our general product direction and is subject to change at any time without notice. It is for informational purposes only and shall not be incorporated into any contract or other commitment. Splunk undertakes no obligation either to develop the features or functionality described or to include any such feature or functionality in a future release.

Blueprint's Mission

“ From spam to glam with Splunk Alerts ”

Should you be here?

eval Agenda = “Maturity Model”

Very conceptual

1. Stage 1: Message of Concern
2. Stage 2: Thresholds
3. Stage 3: Relative Percentages
4. Stage 4: Average Errors
5. Stage 5: Percentiles
6. Bonus Stage 6: IT Service Intelligence
7. Stage 7: Actionable Alerts

Phase 1: Message of Concern

Result

Obvious Improvements

- ▶ Scope of problem is large
 - Solution: indexed fields (index, source, sourcetype, and/or pattern)
- ▶ Problem: “error” matches more than desired
 - Solution: bind with fields like log_level=“error”
- ▶ Result: Stronger search ignores benign results

```
index=_internal sourcetype=splunkd source!="*splunkforwarder*" log_level=ERROR
```

Phase 2: Thresholds

Attempted Solution

- ▶ Only alert if more than “arbitrary” # occurrences / time
 - Arbitrary = perception of healthy

```
index=_internal sourcetype=splunkd source!="*splunkforwarder*" log_level=ERROR
| stats count
| where count>20
```

- or...

Alert

Condition

Result & Obvious Improvements

- ▶ Ignores variances of different types of errors
 - Web errors rarely happen but server errors happen often

- ▶ Fluctuations relative to usage
 - Threshold too small or large during peak or minimal usage, respectively
 - Static thresholds not adjusting with business growth or decline

`perc<X>(Y)` = Returns the X-th percentile value of the numeric field Y, where X is an integer between 1 and 99. The percentile X-th function **sorts the values** of Y in an increasing order. Then, if you consider that 0% is the **lowest** and 100% the **highest**, the functions picks the **value that corresponds to the position of the X% value.**
