

Driven By Data

Analyzing Real-Time Car Data with Splunk
and Machine Learning

Maarten Hofmeester | Data Scientist Itility

September 26, 2017 | Washington, DC

Forward-Looking Statements

During the course of this presentation, we may make forward-looking statements regarding future events or the expected performance of the company. We caution you that such statements reflect our current expectations and estimates based on factors currently known to us and that actual events or results could differ materially. For important factors that may cause actual results to differ from those contained in our forward-looking statements, please review our filings with the SEC.

The forward-looking statements made in this presentation are being made as of the time and date of its live presentation. If reviewed after its live presentation, this presentation may not contain current or accurate information. We do not assume any obligation to update any forward looking statements we may make. In addition, any information about our roadmap outlines our general product direction and is subject to change at any time without notice. It is for informational purposes only and shall not be incorporated into any contract or other commitment. Splunk undertakes no obligation either to develop the features or functionality described or to include any such feature or functionality in a future release.

What If ...

Shut up and drive

- ▶ Predictive maintenance
 - When to change my tires?
 - Detect potential issues
 - Is it time to change the oil?
- ▶ Smart driving
 - Do I save fuel if I take a different route?
 - Can I change my behavior to save fuel or tires?
- ▶ Benchmarks
 - Does my car run with optimal performance?

What Is The Internet Of Things Really?

Is IoT just a buzz word?

Collecting and analyzing data requires an IT infrastructure, but it would be **insane** to put a data center in my car!

How To Make A Car Talk?

Turning my car into an IoT device

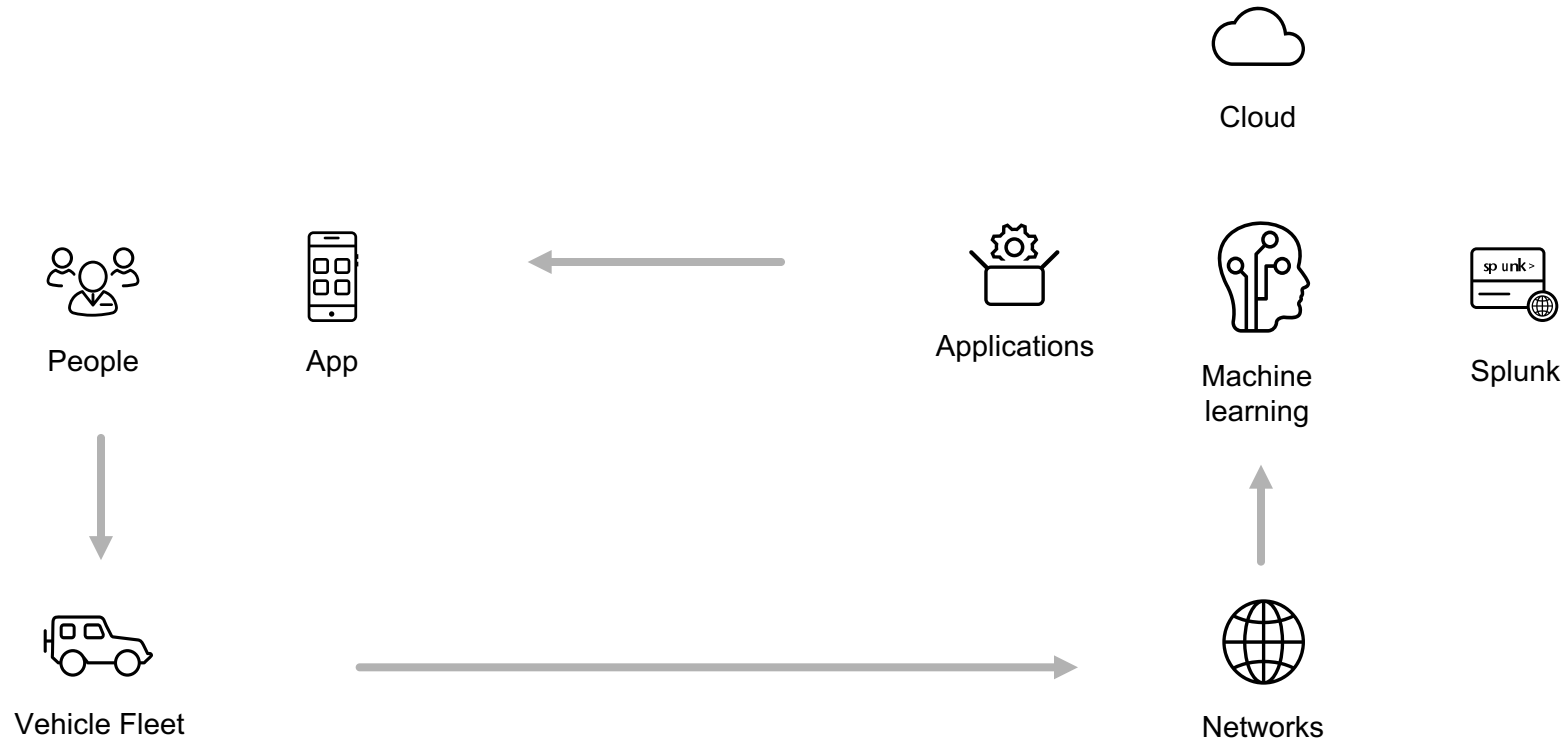

- ▶ Tap into existing car data with OBDII connector
- ▶ Send data to the cloud (message bus)
- ▶ Ingest data with Splunk
- ▶ Analyze and model the data

It's Not Just A Talking Car

It's a conversation

Data != Value

Collecting data is one thing, getting value out of it is another...

Data becomes valuable once you **analyze** it and use these analyses to **model** the world. These models can then be used in **applications** that create **business value**.

Use data in Splunk with models in R

- ▶ R app for Splunk to run data through models
- ▶ Retrieve results in the Splunk platform for visualization and analysis
- ▶ Trigger alerts and expose results for applications

Demo

Analyzing and modeling car data in Splunk

What We've Learned

Mistakes we made so
you don't have to

1. Data collection is only the start; make models
2. Start small, but design for scalability
3. Stop talking about IoT, start using it

Thank You
