

Visualizing the Health of Your Mobile App

Jay Tamboli | iOS Engineer, Capital One

September 26, 2017 | Washington, DC

Forward-Looking Statements

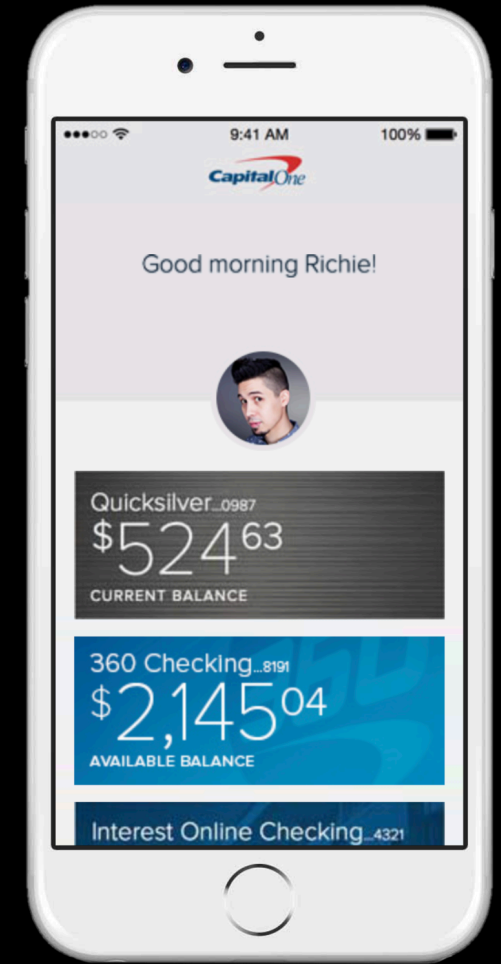

During the course of this presentation, we may make forward-looking statements regarding future events or the expected performance of the company. We caution you that such statements reflect our current expectations and estimates based on factors currently known to us and that actual events or results could differ materially. For important factors that may cause actual results to differ from those contained in our forward-looking statements, please review our filings with the SEC.

The forward-looking statements made in this presentation are being made as of the time and date of its live presentation. If reviewed after its live presentation, this presentation may not contain current or accurate information. We do not assume any obligation to update any forward looking statements we may make. In addition, any information about our roadmap outlines our general product direction and is subject to change at any time without notice. It is for informational purposes only and shall not be incorporated into any contract or other commitment. Splunk undertakes no obligation either to develop the features or functionality described or to include any such feature or functionality in a future release.

Capital One for iPhone/iPad

- ▶ Check balances, pay bills, deposit checks, redeem rewards, etc.
- ▶ Winner, J.D. Power and Associates 2017 U.S. Banking App
- ▶ Millions of users

Agenda

- ▶ Why use Splunk instead of client-side analytics?
- ▶ Handle large volumes of data by narrowing your scope
- ▶ Visualize your results

- ▶ Might not have instrumentation for all code paths
- ▶ Doesn't cover unexpected behavior
- ▶ Doesn't include server error

- ▶ Faster
- ▶ Easier comparison across metrics
- ▶ Easy, flexible visualizations

Narrow your events

Limit the scope ASAP

search and filter | munge | report | cleanup

- ▶ Everything you do after the search step will benefit from less data to process
- ▶ `index=security | spath "response.loginStatus" | search "response.loginStatus"=DENIED`

Power of SPL, Stephen Luedtke, Splunk .conf 2016

<http://conf.splunk.com/files/2016/recordings/power-of-spl.mp4>

Narrow your events

Limit the scope ASAP

search and filter | munge | report | cleanup

- ▶ Everything you do after the search step will benefit from less data to process
- ▶ `index=security DENIED | spath "response.loginStatus" | search "response.loginStatus"=DENIED`

Power of SPL, Stephen Luedtke, Splunk .conf 2016

Narrow your events

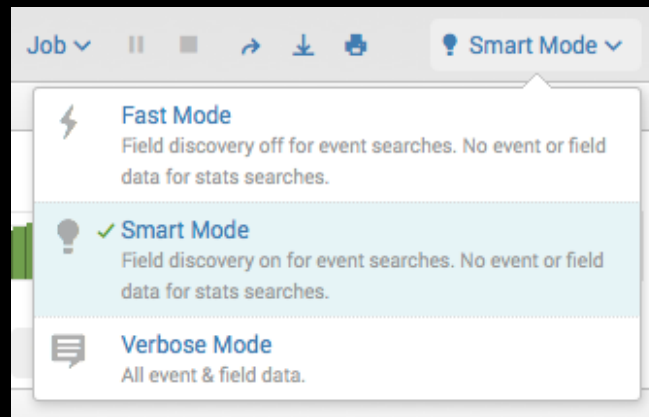

Limit the scope ASAP

search and filter | munge | report | cleanup

- ▶ Everything you do after the search step will benefit from less data to process
- ▶ `index=security DENIED | spath "response.loginStatus" | search "response.loginStatus"=DENIED`

▶ Sampling

- ▶ Fast mode
Or even | stats count

Power of SPL, Stephen Luedtke, Splunk .conf 2016

<http://conf.splunk.com/files/2016/recordings/power-of-spl.mp4>

Comparing Thursday to Thursday of the previous week

- ▶ `index=access URL="/v1/login" date_wday=thursday`
| `timechart count span=1h`
| `timewrap w`
| `where strftime(_time,"%u")="4"`
- ▶ Time range of 1 week means that search head retrieves a lot of data, so limit it to what you really need.

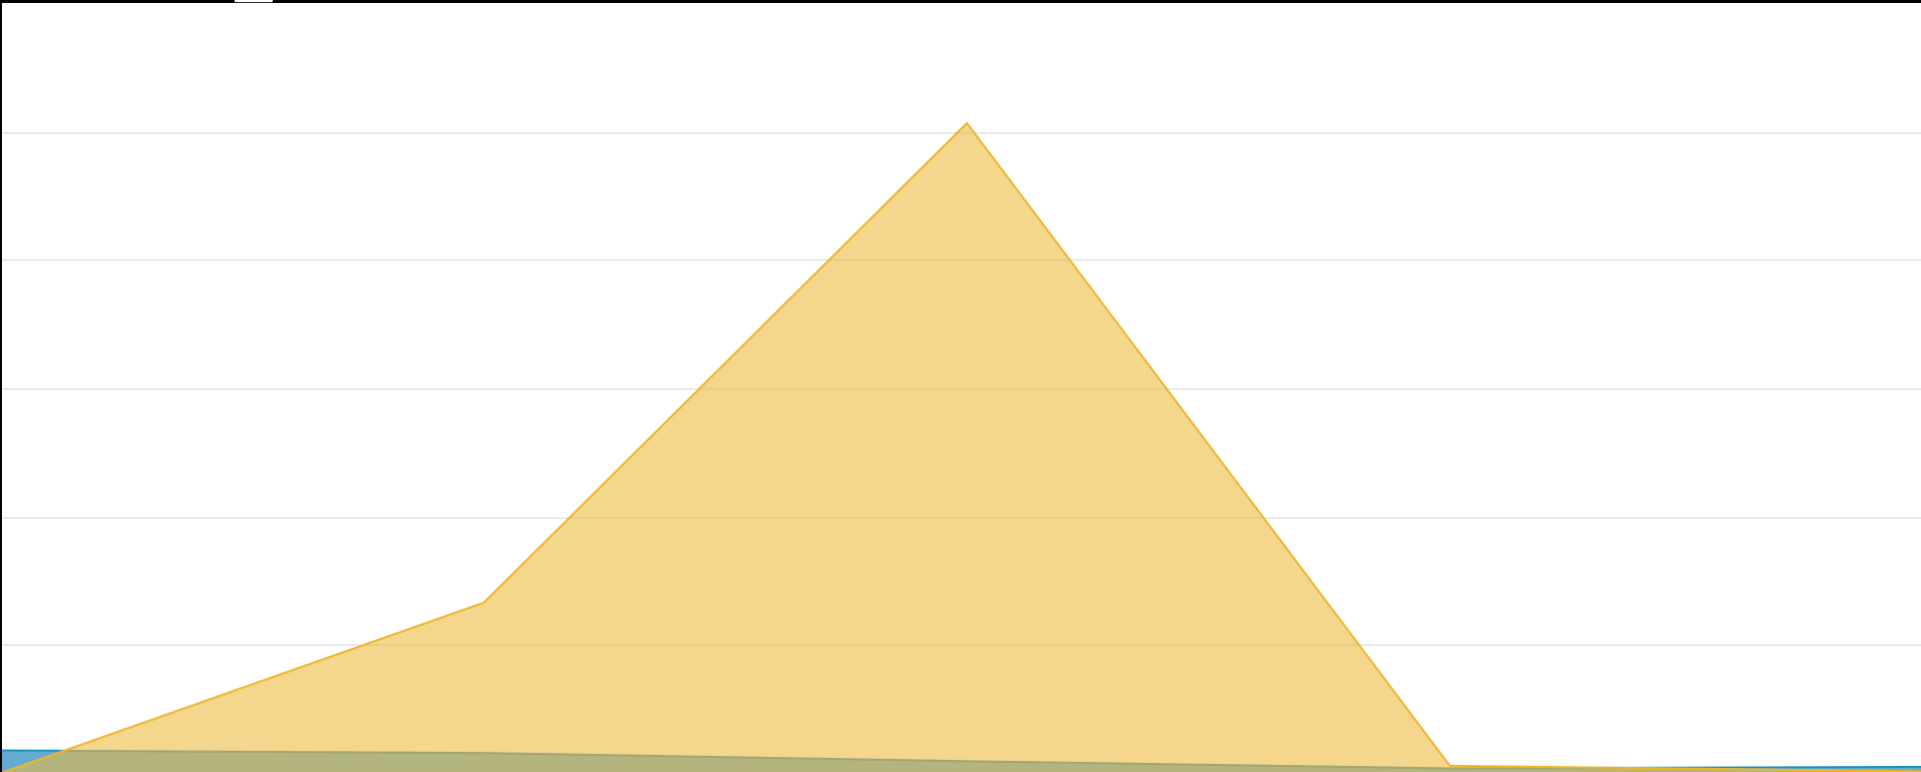

- ```
► index=access URL="/v1/login" | timechart count by client version
```

# Case study: spike in call rate

## Visual

- `index=access URL="/v1/balances" | timechart count by client_version`

1.6	3500	67234	19.2096864

Deciding on a visualization

What is the question you're answering?

- ▶ Knowing the question also determines your search
 - App version by launch or by login
- ▶ Do you want the fraction of the whole, or how the populations compare?

Deciding on a visualization

Area charts

- Area charts and statistics can hide significant trends in overall volume. Purple is ~10%.

timechart is just a table

- [illegible]

- ▶ Pipe the output of `timechart` to `| table _time, first, second, etc.`
- ▶ `timechart ... | table _time, "1.9", "1.10"`

Renaming groupings in a chart

Summarizing values

```

> <search> | eval latest=if(version="1.10","latest","old
versions") | timechart count by latest | table _time, "old
versions", "latest"

```

Renaming groupings in a chart

Adding more detail

- ▶ iOS 11 betas report their version as simply "11.0"
- ▶ Combine with the networking framework version from user-agent for more granularity
- ▶ `index=access URL="/v1/logins"`
`| rex field=user_agent "`
`CFNetwork/(?<cfnetwork_version>[.0-9]*) "`
`| eval detailed_ios_version=iosversion."`
`".cfnetwork_version`
`| top detailed_ios_version`

Key Takeaways

1. You can get great data about your client applications from the server logs.
2. Your search query should be as narrow as possible before processing.
3. You should always keep in mind the question you're answering.

Thank You

Don't forget to **rate this session** in the
